Solutions

About Ixaya

Ixaya is a research and technological development company with highly trained professionals in both areas, generating cutting-edge technologies for the growing needs for optimization of global industries.

For more than 11 years, we have developed high-level software, generating solutions and achieving certification and recognition by prestigious banking and corporate entities, thus realizing safe and effective banking. The pragmatic working methodology that we have in Ixaya allows us to present, in a clear and simple manner, all the process from the initial proposal to the development and implementation.

Ixaya works under the Lean Six Sigma methodology and has Black Belt level certified staff.

Ixaya recognizes that has in its hands the responsibility and opportunity to be an agent of change, so we have the Carbon Neutral certification, that means we counteract one hundred percent of our carbon dioxide (CO₂) emissions into the atmosphere.

Through our BBB (Best Business Bureau) Certification we confirm to our customers the commitment we have to provide the best products and services ensuring our response to the disagreements that may arise.

Mission

Our mission is to establish ourselves as leaders in research and comprehensive development in the field of information technology, thus providing freedom through innovation.

Vision

By 2018, manage to be the largest provider of information technologies for the automotive and aerospace industry in Mexico, recognized for our quality of service and innovation.

Enterprise Solutions

Automatic Data Collection and Traceability

Wireless, mobile, voice and data collection solutions custom-designed to meet your requirements.

RFgen has mobility solutions for companies, that offer validated connectivity towards a multitude of ERP systems, like: SAP®, SAP Business One®, Oracle® JD Edwards™, Infor™ MAPICS, Oracle® E-Business Suite™, Deltek® Costpoint, Microsoft® Dynamics™ and many more.

RFgen

RFgen provides mobile data collection and automated supply chain solutions for:

- Asset management
- Barcode labeling
- Field service management
- Inventory management
- Remote warehouse management
- Warehouse automation
- Voice Picking

RFgen seamlessly connects to your existing ERP environment and enables voice directed operations like selection, put-away, replenishment and so on, to be generated from your ERP system and transmitted wirelessly to any Vocollect mobile computer appliance or compatible device.

Thus, RFgen translates work assignments into voice commands that can guide employees towards a specific hallway or section and then store that location.

Providing actionable data in real time to your employees no matter where they are is no easy task. RFgen makes it easier to capture any transaction in real time from the point of activity. You may quickly develop applications that support connected and disconnected operations for smartphones, tablets, desktops, barcode scanners, voice devices, and more.

ERP — Enterprise Resource Planning

We specialize in implementing business management systems, having certified SAP and Microsoft Dynamics™ consultants.

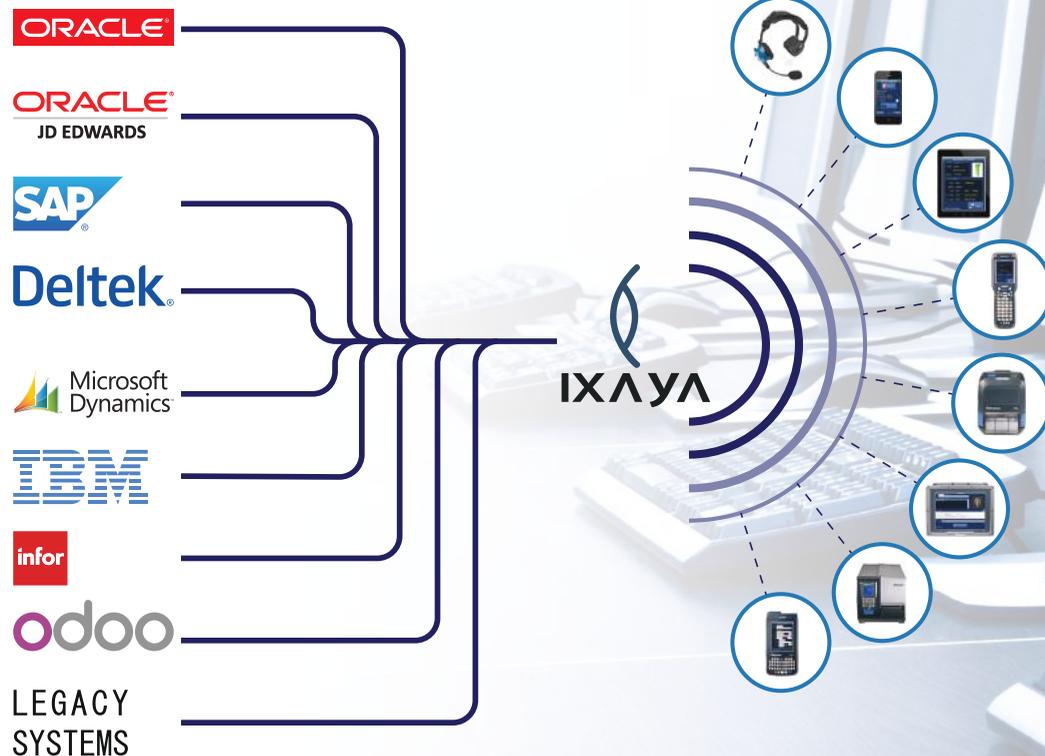

Ixaya provides working tools that allow organizations to focus more on the company than the resources, so our proposal is to implement free and open source elements that are cross-platform, such as Odoo, with connectivity to other similar products, thus increasing the administration and management capabilities of your company.

To enhance the implementation of open source systems, we have developers focused in making the necessary adjustments to the system that will meet the specific needs of your organization and thus achieve your projected growth expectations.

Odoo is an integrated open source ERP system, designed as an alternative to SAP and Microsoft Dynamics®.

SAP® Business Suite is a set of programs that allow businesses to run and optimize various aspects, such as sales systems, finance, banking, purchasing, manufacturing, inventory and customer relations.

Microsoft® Dynamics™ AX is an ERP with a smart user interface that allows you to make decisions with access to real-time knowledge from devices anywhere.

Business Intelligence design and implementation

We have an effective solution to help organizations in real time decision-making processes.

Business intelligence is a set of methods and theories that provide data and insights to business processes. In Ixaya we have the tools to help organizations to identify and develop the most important and representative inquiries from companies, to understand the behavior of their processes and the business opportunities they have.

Therefore, we develop complex data reports and analysis, implementing methods to do this in an organized and regular way that can be modified whenever you require it. Ixaya has certified personnel with extensive experience in this field, turning small companies into high performing organizations through information cube indicators such as QlickView®, Pentaho and other proprietary technology of our own.

Finally, also we satisfy the high command of organizations, developing comprehensive ERP publications and cube key indicators to graphical display views.

To achieve this, Ixaya has become a business partner, incorporating the best tool that exists nowadays in the market, called Roambi®, that runs over iOS platform and provides access to critical information in the hands of management people.

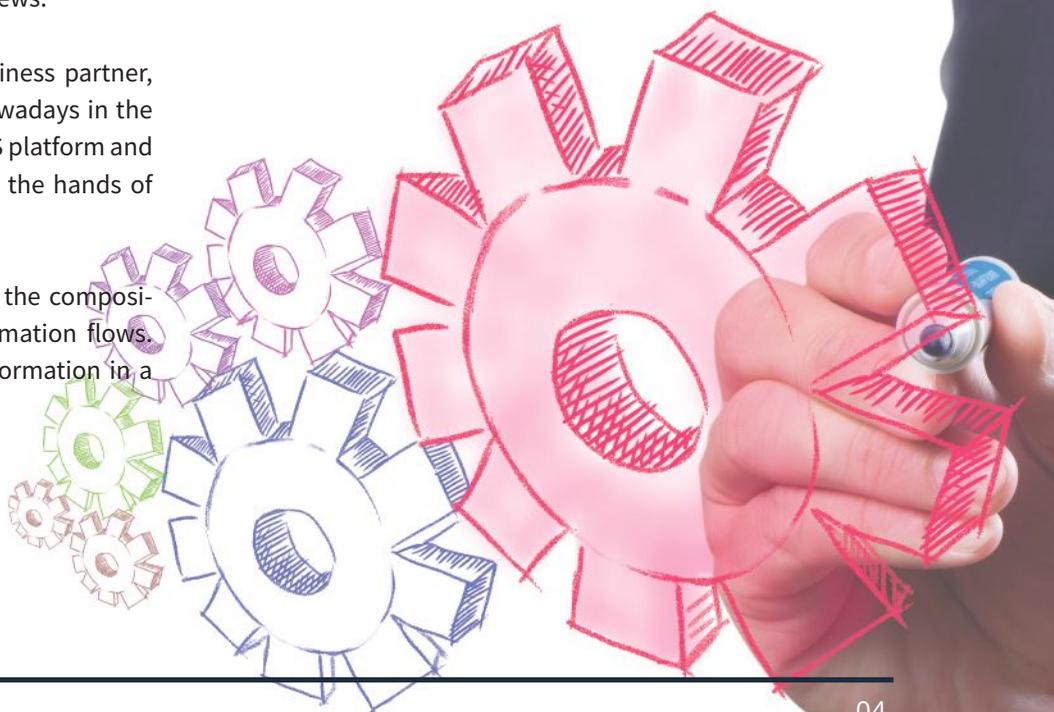

Ixaya assists the staff of organizations in the composition of graphics, or well, to design information flows. The goal is clear: to always know the information in a simple and intuitive way.

Powerful business intelligence tool that enables integration and data cubing in order to integrate reports, views and dashboards, for operational, managerial and executive levels.

Roambi® is a data visualization tool through KPIs (key performance indicators) such as costs, inventory, sales, operations, among others. Roambi also allows the publication of such views in digital magazines.

Hardware

We are suppliers of robust computing and printing equipment designed to assist the industries in the processes of data collection and traceability.

IBM POWER Systems offers servers with open technologies, designed for essential applications. Today's world demands servers designed for big data that are optimized, guaranteed and adaptable to changing business demands nowadays.

Servers that deliver superior cloud economics with secure and open options, and incorporate innovation from an open and growing ecosystem that extends through a variety of applications and improved optimization.

Founded in 2013 as an open technical organization to members that allow data centers to rethink their approach to technology. Member companies are enabled to customize the POWER processors and system platforms for optimization and innovation for your business needs.

In Ixaya we sell IBM POWER8 equipment, as well as OpenPOWER certified hardware to meet all the processing needs and data storage that our enterprise and manufacturing customers need.

Thor VM1 & VM2 — Computer designed to be mounted on vehicles. Toughness for industrial applications. Reduces maintenance costs by integrating parts that are easy to replace by the user himself. It has advanced energy saving options.

Handheld — Combines the functionality of a mobile computer with barcode and RFID reader. Integrates RFID writing ability. Essential part for the processes of data collection and traceability in any industry.

Zebra ZT410 — Printer designed for ease of use. LCD offers an intuitive graphical user interface and easy paper loading. It includes USB, Serial, Ethernet and Bluetooth® connectivity ports. RFID expanded capacity.

Zebra ZQ510 — Optimized printer for printing on-demand tickets for the transport, logistics and government fields. It produces labels for a wide range of uses and applications. It withstands drops, bumps and extreme environmental conditions.

Some of our Customers

We appreciate the support and backing of those who have chosen to work with us, that has allowed us to consolidate our position as one of the most important technology companies in Mexico.

Development of the traceability system in real-time mass production lines, allowing the user to add time and quality controls. Thanks to the data collection system, they have a batch control feature in their receptions, transfers, finished product, shipment and inventory processes, plus a sophisticated label printing system for product identification in different processes. A business intelligence system was developed, allowing users to view the financial and operational information through reports, graphs and dashboards.

We have worked with Mazda as specialized hardware vendors to support their industrial processes.

In 2008, we collaborated to design the yoPago system, the first mobile collection application in the world, through which safe and effective banking operations can be performed.

Integration of its existing systems with a suite of business intelligence tools (Roambi® and Pentaho®) to translate the information from different sources, such as its ERP and files, to interactive dashboards that optimize decision making through key indicators.

Implementation of Odoo ERP, according to their business line. Development of its digital business platform for the generation of a web and mobile community for the iOS and Android platforms. Development of its mobile application for information and office quotation, boardrooms reservations and orders of services for their tenants in iOS and Android platforms.
